

How to run advance-examples.

Step 1:

- Install “*Emotiv SDK Premium Edition v3.3.3 installer*”
- Clone or download advance-examples from:

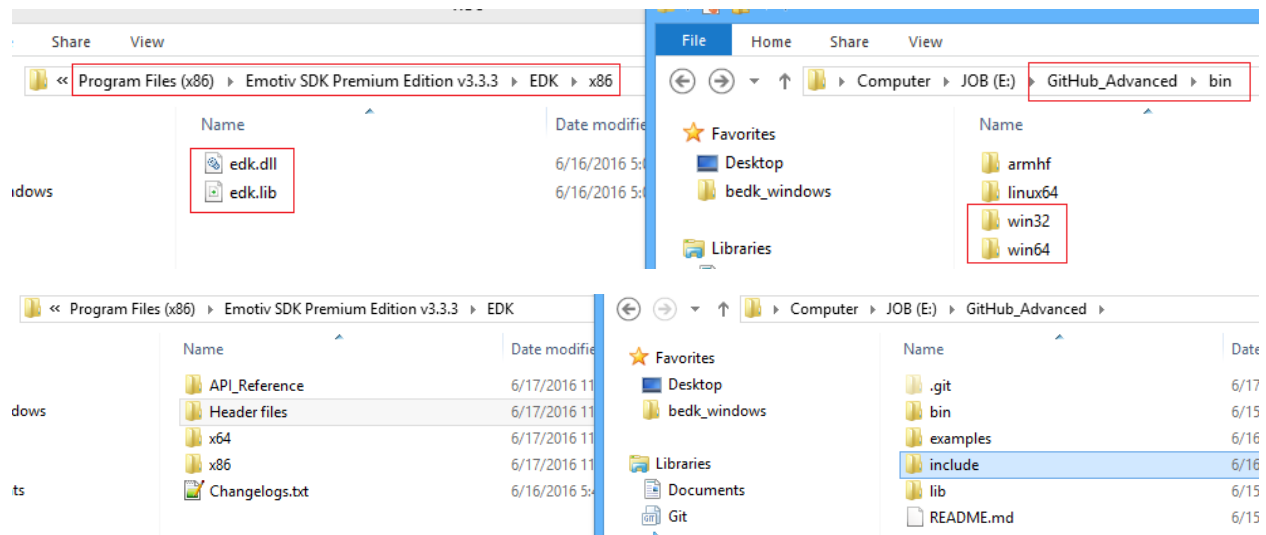

<https://github.com/Emotiv/advanced-sdk> to folder local: Github\_Advanced

Step 2:

- Copy librares from installer folder to “Github\_Advanced\bin\”
- Rename “Header files” folder to “include” folder and copy it from installer folder to “Github\_Advanced/”

On Windows:

- Copy edk.dll (x86) to “.\Github\_Advanced\bin\win32\”
- Copy edk.lib to “.\Github\_Advanced\lib\win32\”

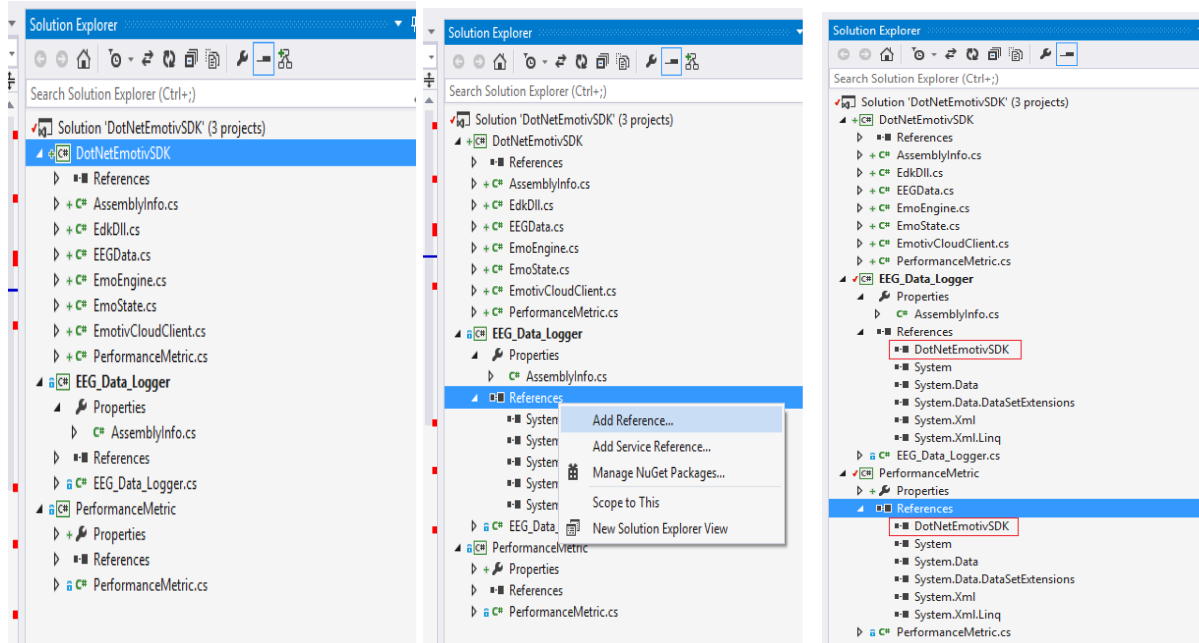

Step 3:

- C++ and Python examples: They works fine now.

- C# examples:

+ Open DotNetEmotivSDK.sln and add DotNetEmotivSDK.csproj project from “GitHub\_Advanced\include\DotNetEmotivSDK” into solution.

+ Add Reference of EEG and PerformanceMetric examples to DotnetEmotivSDK project.

Now they works.

- Java :
